

About Us

Aqina have been involved in pineapple planting since year 2004 by initiating with N36 Pineapple that was in high demand during that period. After involved with the pineapple plantation within 2 years and exporting fresh N36 pineapple, we penetrated overseas markets by exporting to Iran, Turkey, Japan and Korea.

From the beginning, we have always been a reliable fresh pineapple producer in terms of providing satisfactory service and the best quality proven by our capability. We accomplished to hold several tenders of the Malaysian Pineapple Industry Board (MPIB) as a MD2 seeds supplier.

In the end of year 2009, the market demand on N36 Pineapple had reduced. Thus, leading to our decision in collaboration with MD2 plant expertise originally from Philippines who was well experience in MD2 Pineapple planting. We converted our 200 acres land planted with N36 to MD2 completely.

Transition to 2022, we have successfully expanded our plantation to over 1000 acres in Malaysia, in which located separately in Johor, Pahang, Perak and Sabah. Aqina has successfully managed its pineapple trade for more than 18 years. This has proven that Aqina has its own experience in handling the business proficiently.

Our Product

MD2 Pineapple

Hybrid Variety
73-114

Sizes
6 pcs -13pcs/carton (12.5kg net weight)

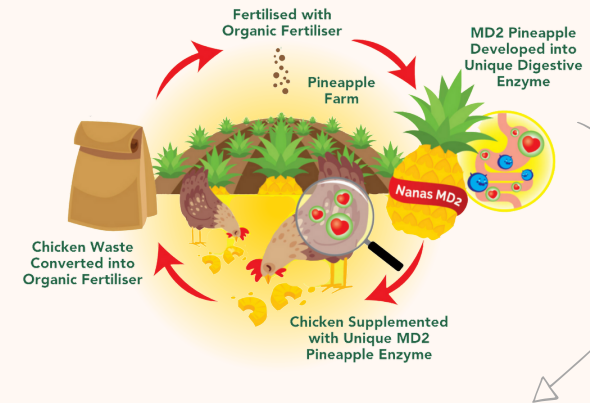

Taste
Min. Brix level of 15.0

Nutrients
4 X higher in vitamin C than other varieties

Shelf life
45 days store in 7.5 degree Celcius

Awarded with:

An Unique Eco-Farming System

It's no secret that economic growth & energy have come at the cost of environmental degradation. In answer to this challenge, Aqina Farm is looking at ways in which we can slow or prevent pollution & protect remaining environments. The element of environmental sustainability is modelled into our unique eco-farming system & in turn created a circular economy within our group of companies. Sustainability is then achieved through minimising waste, introducing natural supplements to our livestock & promoting soil sustainability.

Our Processes

As part of our integral social sustainability effort, the farmers program provides training & entrepreneurship opportunities to the B40 (the Malaysia's Bottom 40% Income Group) communities in the rural area. Each farmers receives decent monthly income & will have a better financial capabilities & skill-sets to build its own business at the end of the program.
